

## Chapter 10

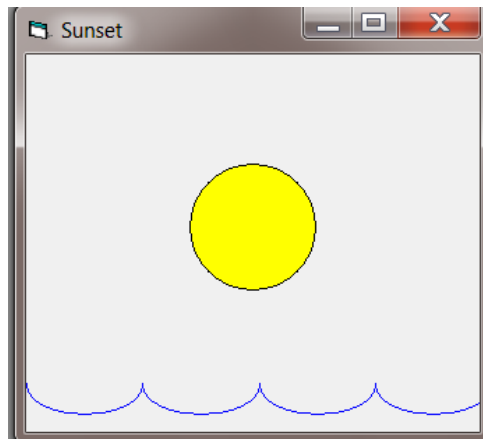

### Programs

---

1. Program House Color – User to select the color of the house, sun, sky, and door by clicking on an option button. The background color of the frames and option buttons should be the same color as the sky. When the sky is blue, all the text should be white, and when the sky is cyan the text should be black. The program should look like the following:

2. Program Sunset – Simulates the sun setting. When the sun hits the water, it should turn into a moon, stop moving, and then the sky should turn black. (Use arcs to create the water). The program should look similar to the following:

3. Program Flying Bird – Simulates a flying bird and plays the bird.wav file. Use the Bird1, Bird2, and Bird3 graphics. The three different animations should look like the following:
